PROFESSIONAL SUMMARY

BCA student with AI Product internship experience building Python-based LLM automation and report-generation workflows, alongside full-stack web and embedded-systems projects. Interested in software engineering, backend development, and AI applications; comfortable working across application logic, databases, and deployment configuration.

TECHNICAL SKILLS

Programming: Python, Java, C, C++, JavaScript, Bash

AI & Automation: LangChain, LangGraph, Pydantic, asyncio, structured LLM outputs, prompt engineering, prompt-injection awareness

Web & Backend: React, Vite, Node.js, Express, TypeScript, REST APIs, HTML5, CSS3

Databases: MySQL (schema design, normalization, transactions, query optimization), MongoDB/Mongoose, JDBC

Cloud & Deployment: AWS (CloudFront configuration and routing, cache invalidation, IAM, EC2/SSH, DNS/HTTPS configuration), Git/GitHub, GitHub Actions (running deployment and restoration workflows), Linux

Mobile & Embedded: Kotlin, Android, BLE/GATT, ESP32, Arduino, PID control, sensor interfacing

Productivity & Media: MS Word (document formatting and production), Excel (IF, SUMIF, COUNTIF, SUM, AVERAGE, MIN, MAX, sorting, filtering, charts), PowerPoint, video editing, photo editing, Clipchamp, XRecorder

Data Structures & Algorithms: Arrays, strings, hash maps, two pointers, sliding window, recursion, searching and sorting, Big-O analysis, BFS, DFS, Dijkstra's algorithm

EXPERIENCE

Humanize Business Solutions Pvt. Ltd. — AI Product Intern

1 Aug 2026 – 30 Oct 2026 | On-site

- Developed a Python-based competitive analysis pipeline combining web-context extraction, LLM evaluation, evidence validation, structured outputs, and automated Word/PDF report generation.
- Used asyncio to evaluate New Implementation, Migration, and AMS Support stages concurrently; separated LLM-generated assessments from deterministic scoring, normalization, validation, N/A handling, and effort calculations.
- Implemented fallback across multiple AI engines and structured capability assessments, evidence, limitations, and AI-assisted effort estimates.
- Designed and implemented key functionality for a custom CMS powering Humanize's landing page, enabling authenticated content management through a React frontend and Node.js/Express/TypeScript backend with MongoDB Atlas/Mongoose.
- Applied DRY/KISS principles and maintainability-focused refactoring, directing implementation, reviewing logic, and making targeted code and UX changes with AI coding assistance.
- Configured and verified AWS deployment components, including CloudFront routing and cache invalidation; improved SEO fallback behavior, backend-failure handling, and multiple areas of the landing-page UX.

Humanize Business Solutions Pvt. Ltd. — AI Product Intern

19 Jan 2026 – 30 Apr 2026 | Remote

- Produced and organized video recordings for project documentation and team activities; Created and restructured .docx, .xlsx, .pptx documents to improve organization, consistency, and usability.

EDUCATION

RCC Institute of Information Technology, Kolkata

Bachelor of Computer Applications (BCA) | CGPA: 7.85 | Expected graduation: June 2027

Relevant coursework: DSA, OOP, Operating Systems, Computer Networks, Computer Architecture, RDBMS, Machine Learning, Database Normalization, Transaction Management, UNIX/Shell Programming, JDBC.

SELECTED PROJECTS

VRCookiez — Production Web Platform | *React, Vite, Supabase, Vercel*

- Built and deployed a responsive commercial web application with modern CSS and reusable UI components.
- Integrated Supabase for relational data, storage, and authenticated administrative controls; configured deployment through GitHub and Vercel.

Smart Safety Beacon — Wearable Monitoring System | *ESP32-C3, C++, Kotlin, BLE* (Team Project)

- Worked on integrating MAX30102 biometric, BME680 environmental, and SSD1306 OLED modules over I2C; implemented filtered heart-rate processing and live air-quality monitoring.
- Contributed to the Android companion app and BLE GATT telemetry pipeline, including hazard thresholds, physical SOS triggering, and Android foreground-service alerts.

PID-Controlled Line-Follower & Dual-Mode Vehicle | *ESP32, C/C++* (Team Project)

- Helped build an ESP32 robotic vehicle using an 8-channel IR sensor array, TB6612FNG motor driver, and custom power circuitry.
- Contributed to coding, closed-loop PID line-tracking calibration, board assembly, and soldering.

DisasterReady — Disaster Management Learning Platform | *React, Node.js, Python* (Team Project)

- Refactored the React/Node.js codebase extensively around DRY/KISS principles, reducing duplication and improving maintainability; built educational games and fixed bugs across the platform.

Credify — Trust Verification & Mobile Security App | *Node.js, Kotlin, Supabase* (Team Project)

- Contributed across the application, including document-scanning and fraud-reporting workflows and Android suspicious-communication alerts.
- Designed normalized MySQL tables and implemented backend verification logic to track document checks and fraud reports.

HACKATHONS & ACTIVITIES

- Smart India Hackathon 2023 — National Level, qualified to Round 2; Ignitathon 2025 — Regional Level, qualified to Round 2; Smart India Hackathon 2025 — Participant.
- Cricket: Competitive bowling all-rounder; participated in CAB leagues (U-13, U-15, U-18, 2nd Division).
- Chess: Trained at Dibyendu Barua Chess Academy; represented school in tournament competitions.

Languages: English, Bengali, Hindi

Interests: Electric vehicles, gaming, fitness
